

We recognise that our operations do have an impact on the environment we will meet or where practicable, exceed the standards set by all relevant environmental legislation and approved code of practices.

To achieve this, we set targets and take actions to ensure continuous improvement which are monitored and reviewed on an annual basis.

The main ways in which we strive to achieve our targets:

- Minimise waste to landfill by reusing and recycling materials where ever possible.
- Minimise use of fuel through route planning and reduction in product distribution and trips to builder's merchants
- Minimise our energy usage through the use of good practice, such as switching off electrical equipment, machinery and plant when not in use.
- Minimise, and where possible, prevent pollution.
- Source raw materials from sustainable sources to minimise environmental impact.
- Instruct and educate our employees to raise awareness in order to deliver this policy.
- Actively promote and encourage the above amongst our customers and suppliers.

All employees are made aware of their individual responsibility to take care of themselves, the environment and others that may be affected by their work and to cooperate with the company to fulfil its duties under Environmental legislation and this policy.

This policy is reviewed on an annual basis and is freely available to our customers, suppliers, employees and the general public.

Nick Sangwin
Managing Director
